AZUAN HANAFI BIN ABDUL HAMID

Configuration & Data Management Specialist

azuanhanafi23@gmail.com | azuanhanafi.my | 014-501 5005 | Kuala Lumpur, Malaysia

Professional Summary

Configuration and data management professional with 9+ years enforcing controlled, traceable engineering lifecycle data across PLM/ERP systems, now applying that discipline in a certification-driven airborne engineering environment aligned to DO-254, DO-178C, and ARP4754A. Experienced in configuration management planning (SCMP), defining configuration items, managing baselines, designing and running change control workflows (CR/PR/ECN), and delivering audit-ready status accounting. Strong track record of tool and repository governance (JIRA, IBM DOORS, SVN/Git, Windchill, Oracle ERP), process discipline, and cross-functional collaboration with Hardware, Embedded Software, Systems, Verification, and Quality teams. Background spans regulated, standards-driven industries including aerospace, medical device, and automotive (IATF 16949, ISO 9001, IEC 60601).

Professional Experience

Turkish Aerospace Malaysia – Software Configuration Management Specialist

Cyberjaya, Malaysia | Apr 2026 – Present

- Handle software configuration management for 5 projects at the same time, keeping each project's baselines, changes, and releases controlled in parallel.
- Developed a project Software Configuration Management Plan (SCMP), cross-checking and mapping it against DO-178C so it covers every SCM requirement: configuration identification, baselines, change control, status accounting, and release.
- Define and maintain configuration items across engineering lifecycle data (requirements, design, implementation, verification, and release) for airborne electronic hardware and embedded software projects.
- Establish and manage requirements, design, and release baselines, ensuring changes are controlled and traceable throughout the development lifecycle.
- Lead Software Change Control Board (SCCB) meetings to assess impact, approve change requests, and prevent unauthorized changes to configuration items across engineering lifecycle data.
- Operate and improve change control workflows (CR/PR/ECN), including impact assessment, approvals, and maintenance of full approval trails.
- Maintain release records and support reproducible builds/releases, including versioning of tools, inputs, and outputs.
- Provide configuration status accounting; reporting on what changed, what is approved, and what is released, also keep data audit-ready for internal and external compliance activities aligned to DO-254, DO-178C, and ARP4754A.
- Support disciplined use of development tools and repositories, including JIRA (issue/change tracking), IBM DOORS (requirements), LDRA (verification evidence support), and SVN/Git (version control and release tagging).
- Took ownership of JIRA administration; secured management approval for SCM to hold full responsibility for JIRA workflow governance and change management configuration, and designed the JIRA change management architecture now being rolled out (see Key Projects).
- Improve templates and working practices for configuration identification, naming conventions, approvals, and traceability; work closely with Hardware, Embedded Software, Systems, Verification, and Quality teams to enforce consistent controls.

Cochlear Malaysia Sdn Bhd – PLM Configuration Controller

Kuala Lumpur, Malaysia | Oct 2023 – Mar 2026

- Hold global responsibility for setting, maintaining, and enforcing configuration item identification and change management standards across the business, ensuring engineering and product data remain controlled and traceable.
- Lead Change Review Board (CRB) meetings to assess impact, approve change requests, and prevent unauthorized changes to product and design data - equivalent to CR/ECR/ECN change control workflows.
- Define and fulfil roles across the change control process (reviewing, screening, and assignment) and author implementation plans captured in formal change notices, maintaining full approval trails.
- Establish and maintain baselines within the Windchill PLM system; regulate the change process so only approved, validated changes are incorporated into product and related documentation.
- Own configuration status accounting: generate and distribute reports and KPI-based metrics on open workflows, data quality, and system status for visibility to stakeholders and management.
- Conduct regular configuration audits to identify duplicates, incomplete records, missing documents, or approvals, keeping data audit-ready for internal and external compliance reviews.

- Govern tool and repository discipline across Windchill PLM, Oracle ERP, and Cherwell CSM, ensuring product releases and implementations follow approved procedures end-to-end.
- Develop and deliver training materials and guidelines for Windchill users and the Configuration Management Team; provide on-the-job coaching and progress monitoring.
- Partner with the Configuration Management Manager and cross-functional teams (Engineering, Quality, R&D) to apply project-specific configuration management requirements.

Armstrong Auto Parts Sdn Bhd – Document Controller Executive

Negeri Sembilan, Malaysia | Sep 2022 – Sep 2023

- Managed full lifecycle traceability for 1,000+ controlled engineering and quality documents in alignment with IATF 16949 compliance requirements.
- Led document audits that contributed to zero non-conformances across 2023 internal and customer audits, ensuring records remained audit-ready at all times.
- Initiated controlled-document process improvements that delivered RM30,000 in cost savings for FY2023.
- Facilitated Quality Control Circle (QCC) competitions to promote lean documentation practices and process discipline across departments.

PHN Industry Sdn Bhd – Document Controller

Melaka, Malaysia | Jan 2017 – Aug 2022

- Designed documentation and configuration protocols for 5+ new model launches, improving project delivery timelines by 20%.
- Compiled and analyzed production data to support management decisions and cycle-time tracking for new model development.
- Streamlined document filing and retrieval processes, reducing information retrieval time by 40% through structured, controlled record-keeping.
- Contributed to internal Lean Six Sigma initiatives, earning 2nd runner-up awards (2018, 2019) for process improvement (ICC) contributions.

KEY PROJECTS

Self-initiated within the CM function at Turkish Aerospace Malaysia, alongside BAU responsibilities.

JIRA Change Request Dashboard – Self-initiated, delivered

- The CM team previously tracked change request status manually across spreadsheets and status meetings, which meant engineers and stakeholders had to chase updates rather than see them directly. Without being asked, I identified this as a recurring bottleneck and built a live JIRA dashboard from scratch using existing filters and gadgets to surface CR status, current owner, and approval stage in real time. The dashboard gave the CM team and engineering stakeholders self-service visibility into where any change request stood, cutting the time spent on manual status updates and freeing up capacity for higher-value CM work.

JIRA Change Management Architecture – Self-initiated, approved and rolling out

- Change requests, configuration items, and SCCB reviews all ran in JIRA, but without one defined structure: items had no consistent ID, key fields could be left blank, and SCCB reviews were routed and chased by hand. I designed a change management architecture for JIRA that gives every change one controlled path from request through SCCB review to closure. It combines three parts: a standard Item ID scheme so every configuration item and change request can be traced across baselines, mandatory fields that stop incomplete records at entry instead of at audit, and workflow automation that moves changes through review and approval with status updates and notifications. Management approved the design, and I am leading the rollout with the SCCB and engineering teams, validating each part before it replaces the manual process.

Education

Diploma in Automotive Management Systems – DRB-HICOM University of Automotive Malaysia
CGPA: 3.95 / 4.00

Languages: Malay, English

Notice Period: Three (3) months

Configuration & Data Management Skills

- Configuration Management: CM planning (SCMP), baseline management, change control (CR/PR/ECN, CRB/SCCB workflows), configuration status accounting, audit support and compliance evidence readiness, configuration item identification, release management
- Engineering CM & Requirements Tools: JIRA (administration, workflow design, automation), IBM DOORS, LDRA, SVN, Git
- PLM/ERP & Service Management: Windchill PLM, Oracle ERP, SAP, Cherwell CSM
- Collaboration & Documentation: Confluence, Microsoft 365, Teams, SharePoint
- Reporting & Analysis: Microsoft Power BI, Google Looker Studio, Excel (Advanced, incl. VBA)
- Standards & Regulated Environments: DO-254, DO-178C, ARP4754A, IATF 16949, ISO 9001, IEC 60601

Certifications & Training

- Windchill PLM Super User – Cochlear Academy
- First Aid at Workplace – St John Ambulance of Malaysia
- Fundamental Skills for Data Work: Data Analysis and Interpretation – LinkedIn Learning
- SQL Essential Training – LinkedIn Learning
- Advanced Excel: VBA – LinkedIn Learning

Professional Development Highlights

- Nominated for HEAR “Aspire to Win” and “Remove Boundaries” awards for leading a rapid product introduction initiative.
- Organized CMY R&D Team Building 2024 at Marina Putrajaya, achieving 100% positive participant feedback and recognition from Cochlear HQ top management.
- Recognized for cross-departmental collaboration and initiative in PLM-based business process improvements.
